

The Heart Considered as a V-pump: a Bond Graph Model

Filesize: 5 MB

Reviews

Excellent electronic book and helpful one. It usually does not cost a lot of. I am quickly will get a pleasure of reading through a written publication.

(Bernardo Feeney Jr.)

THE HEART CONSIDERED AS A V-PUMP: A BOND GRAPH MODEL

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | To understand how the heart carries out its pumping function is a real challenge and it involves multi-disciplinary knowledge. In 1986, Lundbäck suggested that the heart behaves as a piston pump (called V-pump) with a unique piston shape; this particular design creates pressure gradients that cause the hydraulic return of the piston. The V-pump combines characteristic from both positive displacement and dynamic pumps. A physical model can be a precious aid for understanding and predicting the dynamics of a complex system, therefore the aim of this thesis work is to suggest and develop a physical model of the hydraulic behavior of the heart based on the V-pump. Due to its domain-independent representation, the bond graph formalism is chosen for the physical model description. The model is implemented and simulated in Dymola, a software platform based on the object-oriented programming language Modelica. Fusion of knowledge from different areas, such as engineering, physiology and computer science, helped to reach the aim. | Format: Paperback | Language/Sprache: english | 64 pp.
