Modelling and Simulation of High Speed Supercavitating Vehicle

By Burnwal, Santosh / Ghosh, Ajoy Kanti

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | 6 DOF Simulation | Supercavitation is an emerging technology in which the most cursed Cavitation is used as a beneficial to engineering application. Supercavitation is achieved when a body moves through water at sufficiently high speed, so that the fluid pressure drops to the water vapour pressure and a vapour bubble (called cavity) envelops the entire vehicle (except the cavitator and fins). Hence, the skin friction drag of the vehicle becomes almost zero. Hence, vehicle can move in the two phase medium. The development of supercavitating vehicle has been confronted with various challenging problems such as the potential instability of the vehicle, the unsteady nature of the cavity dynamics and the complex, non-linear and time delayed nature of the interaction between vehicle and cavity. Moreover depending upon some non dimensional parameter e.g. cavitation number (), the equilibrium of the vehicle may shift from a stable equilibrium to a limit cycle. | Format: Paperback | Language/Sprache: english | 181 gr | 220x150x6 mm | 124 pp.

Reviews

This book is definitely not effortless to begin on looking at but quite entertaining to read. Better then never, though i am quite late in start reading this one. I am just easily can get a enjoyment of looking at a written ebook.

-- **Elinor Hyatt**

Very helpful to all of category of folks. It is one of the most amazing ebook we have read through. You wont sense monotony at anytime of your time (that's what catalogs are for regarding when you check with me).
